

Screenshot on a Mac,

It's quite simple to take a screenshot on a Mac:

1. While playing "GC: Palestine" press "Command + Shift + 3" .
2. You'll hear the sound of a camera shutter indicating that a screenshot was taken.
3. The screenshot is saved on your desktop with the name "Picture 1.png".
4. You can take multiple pictures, which will be named "Picture 2.png", "Picture 3.png" etc.

Screenshots on a PC (Windows XP and Windows Vista),

Note that you can only take one screenshot before closing the game and saving the screenshot. Each time you press "Print Screen" you'll just update your screenshot, until you quit "GC: Palestine" and save the screenshot with "Paint":

1. While playing, press "Print Screen" on your keyboard.
2. Quit "GC: Palestine" and start "Paint" (To start "Paint": click "Start" -> "Programs" - "Accessories" -> "Paint").
3. In "Paint" choose "Edit" then "Paste" in the top menu bar.
4. Your screenshot is now copied into "Paint".
5. Save the screenshot with the name and filetype of your choice.
